Studies in anatomy from ancient times occupy an important place in the field of medical knowledge. Currently, despite the development of new technologies, interest in the study of the structure of the human body does not fade. Moreover, it's becomes possible new opportunities for the implementation of other approaches to a more detailed study of anatomical structures. Confirmation of this is accompanied by research conducted by authors in the field. Very interesting articles were published in the first issue of EC Clinical and Experimental Anatomy. Attention is paid to the different areas of research proposed by the authors. I want to acknowledge the great contribution of our reviewers and authors, whose collaboration contributes to the improvement of articles. I am sure that the further cooperation of our reviewers and authors will contribute to the promotion of our journal.
