Abstract

Over the last twenty years, several patients diagnosed with Parkinson's Disease have been treated with Vibrational Herbal Medicine. The treatments clearly indicated that the origin of this ailment is viral. We have been able to discover that there are three different genotypes of this virus, thus the reason for different symptoms. It appears that there is a point after being infected at which if the virus is treated, the patient may rebound again. This point is the point at which the brain is affected up to 2.6% of its ability. We have tried to link this point to some percentage of the virus eliminated, but there are other factors involved.

Keywords: Parkinson's Disease; Herbal Vibrational Medicine; Ancient Wisdom

Introduction

1. The Ancient Chinese discovered that ailments of the human body are the result of an increase or a decrease in the vital energies flowing in the energy paths of that body. Their objective became to bring these energies into balance in order to heal or cure the specific ailment. They knew that the energy had to be manipulated to become more or less, depending on the ailment.

There was one basic challenge, they could not measure the increase or decrease of that energy. They did not appear to have a measuring device to do that and were unable to overcome this challenge.

2. Around that time, or probably earlier, the Ancient Egyptians made the same discovery, however, they had a device to measure the changes occurring in the level of energy they were measuring. These energies are unseen energies flowing through the body and affecting every single part or organ of that body.
3. The device that they made was the Universal Pendulum. This pendulum and other shapes and forms of it are seen until today on the walls of the temples in KomOmbo, Edfu and other temples still standing in Egypt. There is a whole section of Pendulum Exhibits in the Louvre in Paris.
4. This Pendulum in the hands of a practiced Adept or Practitioner, can open inroads in discovering the ailments in the human body or "see" the hidden flow of energy through the human body and the changes that occur.
5. All our studies are conducted using a Pendulum and using the technique I devised to measure the changes of energy due to changes in the condition of the patient under study [1-3].
6. This Pendulum can measure the energy of a virus unseen by modern science and its effects and the effects of a medicine on that virus or ailment, measuring the increase or decrease of the energy associated with that virus or ailment.
7. The procedure used may not conform to scientific research parameters used in research, but this is a totally different science and will produce significant and plausible results. It has helped in measuring the results of new treatments, without actual testing, using theoretical testing, since it will measure the changes of the energy of the medicine as it reacts with the energy of the specimen, without the patient ingesting any of it. One may even choose among several chemical medicines for the same ailment in order to obtain the best effective treatment.

Description

This herbal approach is based on ordinary herbs mixed together in fixed proportions in specific herbal mixtures that are designed to heal a certain ailment. Although the mixtures are totally herbal, the effects of the herbs are not determined by the physical and chemical properties of the herbs in the mixtures but on the vibrational properties of the herbs. This technique was discovered by accident and may have been used by the Ancient Egyptians and the Ancient Chinese.

We have been able to discover the underlying rules governing the usage of herbs in Vibrational Herbal Medicine. These rules and regulations were published as a paper called "The Laws of Ancient Wisdom and Vibrational Herbal Medicine"¹.

The important fact to consider is that these mixtures are basically safe herbal mixtures that actually affect the patient positively, eliminating the effect of the illness or reducing its effects appreciably, without any side effects to mention.

These followed the main Rules of the Laws of Ancient Wisdom (Appendix II):

1. Everything in the universe is alive and therefore has energy that can be measured.
2. Each Herb has an energy level that can be measured.
3. The healing qualities of herbs depend on their vibrational qualities and not only on their chemical or physical properties.
4. The energy characteristics of the herbal mixture have different vibrations than those of its sum of constituents.

The description of Parkinson's Disease in the Medical profession is as follows: www.webmd.com

"Parkinson's disease (PD) is a long-term degenerative disorder of the central nervous system that mainly affects the motor system. The symptoms generally come on slowly over time. Early in the disease, the most obvious are shaking, rigidity, slowness of movement, and difficulty with walking"².

Utilization

This technique, through the ability to measure the vibrational energy of organs of the body, and the changes occurring in them also allows the practitioner to be able to recognize the presence of viruses and to be able to measure their characteristics and their energy level changes, i.e. the changes brought about by the herbal medicine taken by the patient on the energy of the virus and on the patient.

This approach has helped in formulating herbal mixtures that are designed to attack specific viruses, gradually eliminating the virus and curing the patient. These mixtures are patentable and are protected under international copyright laws.

Over the past twenty five years we have been able to study and prepare treatments and cures for several lethal ailments, which have been discovered to be viral in origin.

Description of viruses in VHM

Everything in the Universe is alive. Every living being has a specific energy pattern; similar to what we know as DNA. There are four main energies or vibrations that characterize the energies in the Universe. We will use the Chinese notations for them as they are recog-

¹Eltouny Almoez. "Laws of Ancient Wisdom". Published in Explore Magazine year 11, Vol 10, 2001, Prescott, Arizona.

²www.webmed.com

nized all over the world.

These energies were known by the Ancient Egyptians but using other notations that are totally unknown to the general population.

These are four main types of Energy:

1. "Chi" or "Qui" denoted by Q which is potential-neutral,
2. "Yin" denoted by "Yn" is a feminine energy,
3. "Yang" denoted by "Yg" is a masculine energy,
4. "Omega" denoted by "Ω" is a neutral energy of well-being.

Omega was not mentioned in the literature but was discovered in the course of my work in Vibrational Herbal Medicine.

These vibrations are either positive or negative. We have devised a system of measurement, as a means of comparing the same energy types. Each of these energies ranges from +100 to -100, except for Omega, which ranges from +38 to -38.

Accordingly, virus systems are characterized by four energy readings. They could be all negative, such as that of Hepatitis C virus, or two positive and two negative as that of HIV.

The Vibrational Herbal Mixtures made are aimed towards the gradual elimination of the group energy of the virus, in a patient, over a period of time. This is manifested in an improvement in the condition of patients in some viruses, while in other virus systems there may not be a change until the virus is totally eradicated.

Regular ailments

Each organ of the body has a specific energy pattern in the normal state. The presence of a disease in the body or organ, changes the energy of that body or organ. Thus, a comparison between a normal organ and an affected one will yield a difference in the energy pattern indicating an ailment.

In the case of a virus, a mixture is made to eliminate the energy of the virus gradually over time, until the virus is eliminated and the energy of the virus becomes ineffective in the infected body, and the effects of the virus disappear.

Parkinson's disease

It is described by the Mayo Clinic "Parkinson's disease is a progressive disorder of the nervous system that affects movement. It develops gradually, sometimes starting with a barely noticeable tremor in just one hand. But while a tremor may be the most well-known sign of Parkinson's disease, the disorder also commonly causes stiffness....."

The specific causes of Parkinson's Disease are still unknown, and a cure appears to be far ahead in the future. This is one of the objectives of the manuscript.

However, we started working in identifying some ways of alleviating the symptoms of Parkinson's Disease {PD} sufferers about 15 years ago. More than fourteen years ago, we were approached by relatives of a PD patient whose condition was getting worse and none of the regular medicines of the era were helping. This patient was an older man of about 60 years old and had been suffering from this

disease for several years.

Since my approach in alternative medicine was known and the fact that we had some reasonably good record in improving conditions of ill patients with seemingly incurable diseases, helped in requests of treatment.

PD was not one of the ailments that I was, at that time, working with. My main endeavor was with Hep. C viral. However, this was a new challenge and I wanted to discover more about PD.

The more I looked into the progression of the symptoms in patients, the more apt I was to tend towards a viral infection of some sort that would be the cause of this disease.

At that time, I had been working on a cure/treatment for Hep C and had many willing patients, since the treatment was safe, no side effects to speak of, as compared to the chemical treatments of the era, and it was relatively cheap, basically for free. It also improved the lives of patients considerably. The basic premise of my treatments was based on some theories that were vaguely mentioned in several treatments mentioned in different ancient cultures. The most interesting of which were the Chinese healing concepts. The second important one was that of the Ancient Egyptians.

We had discovered a means of measuring the energy of the organ or any part of the patient using his or her photo. This provided a sample of the patient to work with. This made the diagnosis and cure relatively simpler than not having a sample of the patient. On the other hand, people were quite reluctant to dispense with their photos for one reason or another.

Our initial examination of the energy of the patient indicated a large probability that the ailment was caused by a virus. The problem presented itself as to the characteristics of that virus and whether or not any of our treatments were going to be effective.

Procedure

This was a new ailment which was totally different from other cases that came our way. The first step was to measure the energy controlling this ailment and how it was affecting the patient in any changes in the energy patterns of his body.

The main energy of the ailment appeared to be as follows:

- $Q = -50$
- $Y_n = -44$
- $Y_g = -50$
- $\Omega = -26$

This pattern appeared to mirror the characteristics of a virus. What were the effects of that virus on the patient? There was a description of the physical changes occurring on the patient which were those associated with PD symptoms. We started to examine the characteristics of the ailment as manifested in the brain of that patient. The energy characteristics of the ailment in that patient were:

- $Q = -40$
- $Y_n = -35$
- $Y_g = -40$

- $\Omega = -26$

However, on trying to measure the characteristics of the virus in the same patient, we found that the

- $Q = -35$
- $Y_n = -30$
- $Y_g = -35$
- $\Omega = -26$

This meant that, in all probability, the virus affected the parts of the brain differently than the value of the virus itself. We started the process of designing a medicine to eliminate the effects of the virus. Then, check to see the effect of the elimination of these energies on the brain or other organs of the body. Based on our experience with treatment of Hep C viral, we prepared a mixture of several herbs that resonated with the patient and the ailment, that is, it eliminated parts of the energies of the virus assumed and thus, supposedly, would improve the condition of the patient. We did not then know how would this be was manifested, in the patient, in alleviating some of the symptoms, pain, or tremors; or it was just an improvement in the general state of the patient. The treatment was prescribed for a fifteen day trial period, to assess the reaction of the patient to the mixture and to observe any changes in the general condition of the patient. At that point, we had not yet assessed the power or strength of that virus, if any.

Although, after fifteen days of treatment, the patient did not dramatically improve, he did not deteriorate either, nor did he suffer any ill effects due to the mixture. We noticed that his energy signs, in the condition of the ailment improved, but no physical sign indicated that. On the other hand, again, the energy characteristics of the virus decreased, but with no physical change in the patient. These were encouraging signs. There were no ill-effects and a better level of energy for the virus. Even though there was no indication of improvement, this to us, indicated that the medicine was effective and that we needed to improve its power and effectiveness so that its effect becomes apparent.

The treatment for this particular patient was erratic, took a long time to renew the treatment, and even longer to get any feedback. This continued for several months, what kept us going was the fact that the energy of the virus and the ailment were decreasing, slightly mostly, but were decreasing.

One major breakthrough came quite accidentally. I had some metal chandeliers being repaired and cleaned, at a shop in some part of old Cairo. While there, I noticed an older craftsman, whose hand was shaking vigorously, and could not hold a cup without totally splashing it around. I walked around until he was alone at his post and talked to him. I asked if he had Parkinson's, and he replied that he was plagued by this disease for a couple of years and that he could no longer create any art or express himself in his art. So, I asked if he would like the shakes and trembling to go away. He stared at me and said he would do anything to be able to have a steady hand once more. I told him that I will send him an anti-viral mixture to take for fourteen days, that would eliminate the shakes, but he had to take the medicine as prescribed. He agreed. At that time I already had several of the mixtures made for the first patient ready, and checked to see if any would help this man. I sent the mixture in 900mg capsules, to be taken two after lunch, daily. I did not take a photo of the patient; people are very unwilling to cooperate if photographs are mentioned. However, this was an act of compassion and I hoped for the best. Three weeks later we went back to pick up the Chandeliers and the man ran to me hugging me and showing me his totally steady hand praising the Lord for this miracle. His fellow workers were incredulous and I decided to let the matter go. I proved, at least to myself that the medicine works and that was quite an impetus to continue on the track.

Although this was quite a breakthrough, I really had no idea that this batch would actually affect the part dealing with tremors in this virus. My belief, based on experience in dealing with Hep C, was that some mixtures would eliminate certain parts of a virus.

The result obtained with this patient gave us an indication that our hypothesis that the ailment might be of viral origin was justified and we continued to work on that assumption. Since the patient was not totally cured, although we lost track of him, his vitals indicated that the ailment was still present: i.e. the virus was still active. Based on our work with the Hep C virus, we wanted to increase the effectiveness and scope of the mixture to eliminate more of the virus and possibly all of it and thus obtain a cure. At the same time, study the effects of long term infection by this disease.

A new patient presented himself, and although he was not totally convinced of the process, he wanted a cure for his ordeal. We tested the latest mixture on the patient, theoretically, and discovered that they were compatible. This was the same mixture given to the previous patient, on the hope that having worked once, it may work again. The tests showed that three weeks would be effective and might show some positive results. The patient was in his early sixties, having been diagnosed with Parkinson's a few years before and none of the medicines in the market then, were of any effect. So he tried the prescribed dose of two 900 mg capsules daily after lunch or dinner, for the three weeks. We reverted back to measuring the energy characteristics of the patients and that of the virus in the patient.

The characteristics of the virus in this patient were:

- $Q = -40$
- $Y_n = -40$
- $Y_g = -35$
- $\Omega = -30$

After the treatment period prescribed, there were no appreciable positive results. None of the physical symptoms went away or decreased, however, the patient felt slightly better, having somewhat more energy than before. These results to us were that either the mixtures were weak, or we were dealing with a different genotype that might not respond to the other treatment of the first patient, similar to some results obtained with the treatment of Hep C. when some mixtures worked with some patients but not with others. We discovered, later, that that was because we were dealing with different genotypes.

We started with an increase in the scope of the treatment, by increasing its effectiveness, and at the same time increasing the strength of the mixture to have broad base, similar to the concept of a broad-spectrum antibiotic. A mixture with the new specifications was prepared and theoretically tested on the patient. It showed a good response of the patient to the mixture. The prescription was to take the treatment for 21 days, at 1800 mg/dose after one of the main meals.

The patient followed the instructions and took the prescribed dose for the treatment period. Although there was a change in the energy characteristics of the virus within the body of the patient, it was not sufficient to manifest itself in some physical manifestation, such as a reduction in tremors or stability of the patient's motion. The energy characteristics became:

- $Q = -36$
- $Y_n = -35$

- $Y_g = -32$
- $\Omega = -26$

Before:

- $Q = -40$
- $Y_n = -40$
- $Y_g = -35$
- $\Omega = -30$

The changes may not appear significant, but a change appears to have happened.

In this third case, If we compare the results to this third patient, who took the first batch, after a great deal of persuasion on the parts of a common friend, and who took two additional batches after he felt a great sense of relief after taking the medicine. The results are indicated as follows:

Before taking any VHM:

- $Q = -55$
- $Y_n = -45$
- $Y_g = -60$
- $\Omega = -30$

After taking all three batches of VHM:

There was a difference between before and after taking the medicine³.

- $Q = -20$
- $Y_n = -23$
- $Y_g = -30$
- $\Omega = -18$

The difference in the values, indicate a positive change in the condition of the patient.

At that point in time we had not devised a method to compare the rate of elimination of the virus as we had not reached a specific value of the volume or quantity of the number of complex virus systems in any of the alleged genotypes of the virus. We had been devising a

³Clinical observation.

method to translate the value of the active components of the virus into numerical values to be able to compare the amounts eliminated by each batch and obtain a value for the active components of the virus. This would also help in determining whether or not there were different genotypes or strains of the virus.

Treatments of patients continued on and off, throughout the following few years. Whenever we heard of someone with PD, we were able to obtain a sample of that person, i.e. a photograph, to study and compare notes on their condition as time passed by. This was also used to compare, not only changes that occurred to the patients, but also to check and see if our treatments are as good or better, than what is available in the market. One of my earlier patients, that were introduced to me around 2005, was quite important because he was a good friend of a friend and was from the former Egyptian Royal Family. Through this friend, I sent him two courses of treatment, which I believe had an effect on his condition.

My first estimate after the first treatment was that the treatment had eliminated an estimated 40% of what we, at that time, believed the virus to be composed of. Our preliminary response was that the patient felt quite good and did not have any negative reactions to the medication. We gave him the second treatment, also for a month, two 900 mg capsules per daily dose. The patient still felt well but for some other reasons, we could not communicate with him and the treatment stopped. We monitored his condition, even until today, to

Initially	Two months after 1 st treatment	2 years after 2 nd treatment	10 years later
Q = - 45	Q = - 32	Q = - 20	Q = - 17
Yn = - 44	Yn = - 30	Yn = - 18	Yn = - 16
Yg = - 45	Yg = - 30	Yg = - 18	Yg = - 16
Ω = - 20	Ω = - 15	Ω = - 10	Ω = - 8

check if he were taking any new medication or if he were relapsing. We have his energy characteristics for several time dates.

The energy characteristics of patient KF

Prior to treatment

We have finally realized that our treatments may have helped this patient in maintaining the stability of his condition and may have contributed to its stability. Today, we believe that he has actually eliminated about 40% of the virus, and that may have stopped any deterioration of his condition. Constant checks over the years have not indicated any reduction of the amount of virus, and his condition remains stable. It may be that whatever medication he may be taking, does not attack the virus but maintains the status quo.

It has been close to 15 years since the final treatment, since he is a semi public figure; he is mentioned in the news now and then. He does not publicize his illness, and we respect his privacy. However, we can check his condition whenever we can. He appears well for wear and does not seem to suffer any worse since he finished our treatment. His energy levels have fluctuated around the last value after our last treatment. This, to us, means that any other treatments have not reduced the level of the virus in him. This also means that he is stable and the virus has not affected his condition.

Over the last twenty five years there have been several well-known names that have been stricken with Parkinson’s Disease (PD). We have followed their health progression over the years to check on any changes and to compare them with any new treatments that I may have. One famous athlete, who has since passed away, was the first patient we took under study. We made theoretical trials using actual

mixture treatments and checking the energy changes due to the administration of such treatments. Another famous Hollywood star was also under our scrutiny, because of our admiration of his work. This actor has been in the news as is an advocate of Stem Cell Research, to help patients with this affliction. We have his energy characteristics taken when it was announce that he actually has PD. Every now and then, we would check and compare his present condition with his previous condition and make whatever deductions we can.

Currently	Three years ago
Q = - 24	Q = - 40
Yn = - 30	Yn = - 43
Yg = - 28	Yg = - 40
Ω = - 17	Ω = - 26

That particular person has an energy characteristic as follows today:

We were studying some Alzheimer patients and discovered that that are limits after which a patient may not recover some of the lost functions. For Alzheimer patients, those were; if the ailment has covered up to 4.5% of the functions of the brain, any additional medication may stop further deterioration, but may not improve the condition of that patient. However, if the percentage is below 4.5%, medication may improve the condition of the patient and that could be physically apparent.

We tried to find a similar function for PD patients, and that would help greatly when offering medication. The ratio for the functions of the brain differed, however, it became between 0.0% and a maximum of 2.5%. That is; if the patient is affected up to 2.5% of the brain, this may be reduced to 0.22%, which a great improvement and may even return some of the lost brain control, but would not return to normal.

If we apply these criteria to three patients, the first is KF: He took two full courses of the vibrational herbal medication several years ago, we have the virus eliminated at 54%, and the brain is affected at 0.2% which is quite good as has not deteriorated over the last few years. We have projected his condition, if he were to take treatment PD114, which we have just designed; his rate would drop to 0.04%. This is practically normal.

Before treatment	After last treatment
Q = - 40	Q = - 24
Yn = - 36	Yn = - 20
Yg = - 30	Yg = - 19
Ω = - 23	Ω = - 12

The second patient, we did not treat him, but used his condition as a marker, to check for the progress of the disease. His brain, as far as we can estimate, is currently at 1.2%, and if we could offer him PD 114 for 40 days, he would improve to 0.6%. This may indicate some positive physical changes. There is a third patient who took some of the vibrational Herbal Medicine twice, and then did not want to continue. This is a male, in his early sixties quite well off and has the means to try whatever medications that could improve his condition. Some patients do not realize that some ailments cannot be totally cured, and that they may have to live with the disease for a long time until such a time as a cure has been perfected.

Our analysis indicates that the virus has been eliminated at about 49%, as he has a more powerful genotype. However, the brain has been affected by0.8%, and if he were to continue and take another group of Herbal Medication: PD 114, his condition would improve so

that the affected part of the brain would be reduced to 0.08%, which is basically close to normal. His condition did not change much, thus we may conclude that he may not be taking any anti-viral medication.

Another case, which we have tried to recruit as a patient, he is a famous, young soccer player who seem to have become afflicted by an unknown illness and had to be diagnosed overseas as it is very difficult to see PD cases in such a young age in Egypt. We diagnosed his condition immediately and offered to treat him. His energy characteristics are:

- $Q = -48$
- $Y_n = -40$
- $Y_g = -56$
- $\Omega = -30$

These values appear to be high and indicative of a more powerful genotype than previously seen. The percentage of the brain affected is 1.8%, which is quite high for someone who has just been diagnosed with PD. It could be that he has had the virus for a much longer period of time, or it is a more aggressive genotype. If we administer PD114 (The latest herbal medication) for 45 days, this will improve the affected % of the brain to 0.2%; which is a great improvement, although we are not sure whether he will be able to resume his soccer career after that treatment.

Results and Conclusion

1. All cases studied tended towards an inevitable conclusion that this ailment must be caused by a virus.
2. Some of the cases were quite severe while others tended to be weaker in manifestation. This led to an understanding that there may be different genotypes of the virus. We will assume that there are three genotypes.
3. In some of the trials conducted, we were able to measure a percentage of the virus eliminated. The effects of this trial may be still visible on the patient, many years later.
4. We have been able to determine a level at which the brain is affected by the virus, below which reversal of symptoms may be attained. This level is 2.6% of the functions affected. Anything above that, no changes will be noticeable if treatment is administered, however, it will stop further deterioration of the patient's condition.
