Abstract

We have designed a vibrational Herbal Cure for Covid-19 and that was published on March 1st, 2020. The Vibrational aspect of the cure means that we rely on the vibrational and energy properties of the herbs in the mixture to eliminate the harmful energy of the disease. This has been tested on several people only, due to the restrictions imposed on all persons posted positive on mingling with anyone and in addition to a quarantine and total isolation. This has made presenting the cure to anyone extremely difficult. We had to rely on close relatives and friends who become infected. This is made on principles of the Laws of Ancient Wisdom used by the Ancient Egyptians and discovered by us.

We have characterized the Covid-19 virus as containing three genotypes. Type I, which is quite lethal and needs to be attacked immediately and causes most fatalities. Type II, slightly less lethal, but still quite dangerous and may also lead to death. Type III is the weakest of the types and has few symptoms and may actually resolve itself with minor medication.

We are now presenting a new method to making a vaccine based on the vibrational approach, as it is less reactive, more effective and totally safe, as an alternative to the regular methods of vaccination.

We have designed a mixture that will introduce a small amount of the Covid-19 energy in the person to be vaccinated and that will immunize him or her, for a period of eight weeks. This period may be extended by taking a small dose of the vaccine to extend the period for another 4 weeks. This will not subject the person to any infection from the vaccine.

This vaccine is made in capsule form, 900 mg/capsule, to be taken for six days, to introduce a certain level of protective Covid-19 safe energy to formulate the immunity process in the subject. These vibrational herbal capsules are made from very common herbs that are totally safe and cause an immunity barrier against Covid-19, in the subject taking it.

Keywords: Covid-19; Vibrational Herbal Medicine; Vaccine

Introduction

After six months of scurrying and back tracking to find a cure for Covid-19, which we presented to the world, but no authority deemed it necessary to even inquiry about such a possibility.

We conducted our individual clinical trials on the samples of the cure. It succeeded on all cases. We had one case of type I, which is the most difficult to treat and cure. Three cases of type II which are less serious but still deadly if not treated right or on time. We had several type III cases of Covid-19, which are serious but in many cases just cure themselves with prudent health management.

The cure is quite effective and will eliminate the type II and III in five to seven doses of 1800 mg capsules of the cure, to be taken every 12 hours. They relieve the pain and fever after about 12 to 24 hours and maintain normal body temperature throughout. Type I is the same but it is imperative that it be diagnosed early and the treatment to start at once. After initial experimentation, seven doses are required; each dose is taken every 12 hours. To be totally on the safe side.

As viruses go, we can also design a vaccine based on the same principle, that a small enough dose of the contagion, or its energy equivalent, introduced to the body, may prevent the virus in penetrating the defenses of the body and act as a vaccine [1-4].

Methodology

This theory has to be tested as it has never been tried before. Our studies indicated that the energy characteristics of the type I of the Covid-19 virus are as follows:

$$Q = -32$$

$$Y_n = -32$$

$$Y_g = -32$$

$$\Omega = -12.$$

This is the energy radiating from the simple Covid-19 cell. This is the energy that affects the various cells of the body and affects each organ to become infected. The concept of vaccination is to introduce a small amount of the contagion into the person, to cause a reaction that will lead to an antibody response to prevent the body from allowing the virus to spread. This is the theory behind vaccination; however in vibrational herbal medicine only the energy is transmitted and not the physical properties of the disease. Could that work as well?

A small amount of the energy of the virus, but having the same virus characteristics, has to be built up in the patient to prevent the admission of the full virus if it ever attacks the patient. Several simulations using different energy quantities were tried. They were checked to see if the virus could override their resistance or not. This is used to determine the level at which immunity may be produced in the body.

Procedures

The first energy group tried was:

$$Q = -2, \text{ then } -4 \text{ and then } -6.$$

$$Y_n = -2,$$

then -4 and then -6

$$Y_g = -2, \text{ then } -4 \text{ and then } -6.$$

In the theoretical simulations, the virus was able to break through the shield of resistance for the values of $Q = -2$ and $Q = -4$ and infect the body. It could not, for some reason, break the resistance of the value of -6, for all the energy types, ie, Q , Y_n , or Y_g . This meant that a subject with these Covid-19 energy signatures, introduced into his/ her blood stream, may repel the covid-19 virus attacking him/her. If this were the case, then we may have some meaningful vaccine.

The questions are:

- a. How will it be introduced into the body?
- b. How long would such an energy signature remain in the subject after being introduced?
- c. How long will it be effective and safe to prevent any contagion?

This is not an easy task. First design a mixture that has the qualities of Covid-19, but not to the level of transmitting the whole power of the disease. Just enough, to react with the body and give the body its defense against the Covid-19 virus as indicated above. The next step is to introduce this amount into the blood stream of the subject. This is by designing and controlling the amount of the vaccine to be taken. This amount was calculated to be reached after six days of 1800mg/ day of the vaccine taken by the patient. This amount reached the level of $Q = -6$, $Y_n = -6$ and $Y_g = -6$, after six days of ingesting the vaccine. No ill effects were detected on the subject and no adverse side effects were observed.

Such is not an easy endeavor to accomplish. We tried several designs for various mixtures and tested each against the virus. After several simulations, only one mixture appeared to fulfill the required task. This mixture was again theoretically tested against the covid-19 virus and passed the rejection test.

We wanted to measure how long will the effects of the vaccine last in the subject before losing its potency, if any. The second question to be answered is how long it will keep in the subject and prevent the virus from overpowering the vaccine defenses, during that period of time? How long will this safe period be in which the subject is safe from infection?

If there is a safe period for the effects of the vaccine to be effective, how long will that be? The energy introduced will dissipate in about seven to eight weeks. We discovered, by trial and error, that we can boost the levels of energy of the vaccine by taking one or two extra doses of the vaccine after six to seven weeks. The Characteristics of this mixture is such that it will be the opposite of the virus energy and able to block the virus energy from entering the subject. We tried the vaccine on myself, a friend, and my daughters just to see the results. None of us had any infection, until now, even though my son in law contracted Covid-19 type II, my daughter was not infected and he was cured after taking seven doses of the Covid-19 cure I gave him. After six weeks we all had to take two booster doses of the vaccine as the energy levels began to hover around (-4) for all energy groups.

Results and Discussion

From our study and the results obtained, we have reached the following results:

1. We have been able to design a specific mixture that contains the energy characteristics of the Covid-19 virus, but not its physical properties.
2. The mixture has been successful in transferring this energy into the blood stream, of several subjects.
3. These energy signatures have maintained their power for at least six weeks without weakening.
4. After seven weeks, all subjects were given booster doses to bring the energy levels to the vaccine level parameters. This will continue as it has been deemed effective and maintains the level of immunity within the safe values.
5. After about ten weeks of minor and major mingling with the normal population and some infected subjects, none of the vaccinated subjects became infected.
6. These results did not take into account any natural tendencies of any of the subjects to have natural immunity from the Covid-19.
7. These results could lead to a major study to determine whether or not such a vaccine is actually effective, at least for six to seven weeks, initially and as the need may demand.

Conclusion

1. Ease of preparing and administering the vaccination.
2. Does not appear to have any side effects.
3. We have been able to maintain the energy levels in the subjects' bodies for the designed time of about 55 days.

4. We have prolonged this period by additional vaccine capsules after 50 days, two capsules daily for three days, to keep the energy levels at the immunity levels for an additional 45 days.
5. None of the subjects have been infected by any of the Covid-19 types.
6. This vaccine may be working, but will need a much larger sample, and more aggressive vaccination to be able to assert that the vaccination is a complete success.
7. It is a relatively safe and easy way of getting immunity, even for a short time and can be prolonged, but it does not infect the subject by any contagion. It may be a life saver for health professionals.
8. It is safe to repeat several times without fear of any side effects.
9. We would recommend that it be tried on a larger scale to determine its effectiveness.
