Introduction

The human body is a ball of renewable energy. I developed the relativity at the body level in its atmospheric setting My hypothesis accentuates the importance of the energetic material and its primordial role in future cures for certain diseases.

My hypothesis

Extension of Einstein's hypothesis

"The agent (Na^+) acts constantly on the circulatory rotation of the neurons, which accentuates the operational deficiency of the cellular rhythm in normal state, the agent (Ca) acts on the bone system and indirectly on the cardiac rhythm. The Body Gravity is based on the magnetic field of each neuron that provides the transmission of a bioelectric signal called nerve impulse. The neurons have two physiological properties: excitability or the ability to respond to stimulations and convert them into nerve impulses and conductivity, which is the ability to transmit impulses into the body energies act constantly on the circulatory rotation of the neurons which accentuates the operational deficiency of the cellular rhythm in normal state and creates the productivity of the mitochondria the power plant of the cells. This relativity provokes the law of bodyweight with respect to the atmospheric deficiency".

Definition

COVID-19 = Human body gravity syndrome = Failure in Blood cells' speed.

COVID-19 configurations

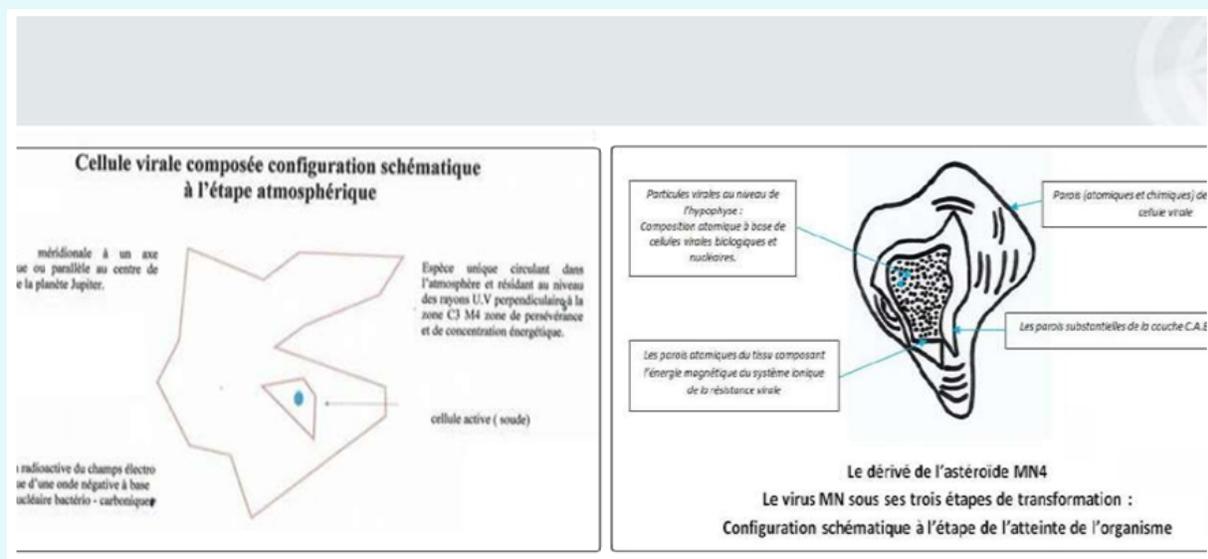

Figure 1

The human body encompasses three energies

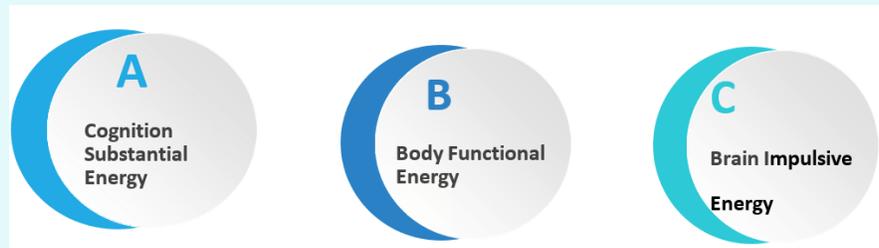

Figure 2

Energy A

It is a substantial energy; it acts on the level of the blood circulation by allowing it to renew itself. The component cells circulate at a steady rate at the heart rate and react according to the intensity of the body's magnetic energy. It is the level crossing of the blood system, it deteriorates the infectious level of blood while proceeding to the multiplication of red and white blood cells, the functional ion of this energy are located at the level of the central axis of the liver. The substantial energy acts at the level of the blood circulation allowing it to renew itself. The component cells circulate at a steady rate at the heart rate and react according to the intensity of the magnetic energy and that in the parallel direction of the sun. This explains that the rejection of toxins at the level of the lymph acts on the protection of the body from any destructive energy = Cognition.

Energy B

It is functional and self-defense energy of the body, the rejection of toxins at the level of the lymph acts on the protection of the body from all destructive energy at the moment when the radioactive rays act directly on the vision of the producing cells. Females at the blood level = Body.

Energy C

It is an impulsive energy that allows the elimination of any toxic body accessing the envelopment of neurons that are made of a very thin but very strong connective and protective tissue acting on the lymph. Its texture is formed from chromosomes very rich in proteins and iron, it mainly participates in the constitution of embryonic cells, this element projects rays that act directly on the gray matter fighting in this way any radioactivity or viral infection in the body for this reason, in the event of failure, a malfunction occurs which in turn causes the elimination of the agent, so a substantial imbalance in the bones appears. This imbalance subsequently affects the spinal cord and causes lesions via atmospheric radioactive waves = Brain.

Body relativity

The impulsive energy has some cellular fragments of the lymph and it is at this level that the nerve of the senses is located which is the motor of the brain. The root is located at the spine L5/S1 Which is the most important region because it is the center of gravity and the source of any organic failure. The gray matter is the only essence of the bone mechanism. This liquid contains 1 billion 175,000 active cells, each cell contains a neuron, each neuron comprises the set of: 1 atom of oxygen + 1 atom of iron + 1 atom of magnesium, each atom is enveloped by a thin wall containing an electric charge this charge represents the life of the body.

The potential energy of the gray matter is the substantial energy. Impulsive energy propagates very powerful and undetectable rays that act on the gray matter and cause heat that is distributed at the body level and expands as a function of the body's magnetic field,

these rays are propagated by solar energy. It acts on the circulatory rotation of the neurons, which accentuates the operational deficiency of the cellular rhythm in a normal state, the calcium reacts on the bone circuit and indirectly on the cardiac rhythm thing which controls the law of the gravity of the organism compared to atmospheric deficiency. The electrical intensity expands the circuits feeding the gray matter; this pressure causes a force of gravity on the cells composing the tissues and proceeds to the electric charge of the chromosomes, that makes a movement: The functional energy, which defines the relativity in the body energy circuit.

COVID-19

Definition: It is a viral cell. The ionic radioactive components of this cell are transmitted from the atmosphere on a very regular field and absorb the substantial energy of the body based on the iron agent which is formed from bulbs and fixed in the walls of the blood vessels it is because of this agent that the oxygenation of the organism is deactivated:

- The bulbs cause dilation of the O₂ molecules and an explosion of the protective atmospheric radioactive ions which causes a viral contamination.
- The tissues that make up this protective veil are manipulated by the speed of blood circulation that is on the way to abundant speculation and without limits.
- The radioactive activity is very resistant to the cardiac system, although the rhythm seems very little variable, the energy activating the arterial cells is compensated at the blood level and blocked by a failure of the potassium agent which is in the form of energy sparks in the form of compressing and decompressing body it is energy B which is the essence of the cardiac mechanism.
- This failure causes a relaxation of the vital tissues at the level of the blood velocity which becomes greater than the magnetic pressure of the arterial pump of the blood circuit.
- When the oxygenation of this nerve is blocked, it causes a dysfunction in the blood thing which causes a failure in the respiratory level.

Coronavirus: Failure in blood cells' speed-1

The failure of the body energy flow is caused by a virus, composed of radioactive elements; its shape is rounded and carries two rectangular shapes at the ends which have the function of absorbing the element oxygen which allows it to multiply at in 21 other balls. The center of gravity is active. Its radical force is propagated from ions of hydrogen. This infection affects the gray matter and blood causing multiple inflammations in the body.

The virus energy circuit proceeds with the digital operation of the respiratory rhythm in the first place.

It affects the organism by preventing any shaking of the defensive cells of the organism and reacts directly on the gray matter and its detection will only be positive if the body is really impoverished in iron, the agent act on the heart and cell rhythm and goes up to the radiation of neurons matter it intensifies in the absence of the iron agent at the level of the organism therefore deliberates a failure in the gray matter.

The destruction of the viral cell must be fixed on a remedy that reacts on the lymph and spreads to the gray.

The authenticity of this formula deteriorates the radioactivity of red blood cells which increases by the chemical reaction of any chemical and atomic agent. The failure at the organic level at the starting point of the viral cell is localized at the level of the respiratory organs. The virus is revealing at the bone level and destroys the resistance of the cells while causing dilation at the level of the atoms

forming the bone tissues.

The radioactive activity of the virus is very resistant to the cardiac system, although the rhythm seems very little variable, the energy activating the arterial cells is compensated and blocked by a failure of the potassium agent which presents itself in the form of energy sparks in the form of a compressing and decompressing body, energy B is the essence of the cardiac mechanism. This failure causes a relaxation of the vital tissues at the level of the blood velocity which becomes greater than the magnetic pressure of the arterial pump of the blood circuit.

When the oxygenation of this nerve is blocked, it causes a malfunction in the blood which causes a failure in the respiratory level.

Coronavirus: Failure in blood cells' speed-2

The excess of carbon attributes to an immune weakness at the level of the antibodies and subsequently at the level of the nervous system which becomes compressed by the continuous influx of the arterial pressure = failure at the muscular level.

The ions of this cell are made on a very regular field and absorbing the body energy, based on the iron agent that is formed from bulbs in the form of gas residing in the walls of the blood vessels the oxygenation of the body is activated.

The cell multiplication is well organized and is constantly done as long as this energy is operational at the level of this nerve. Failure occurs laterally with increasing blood velocity at each uncontrolled pulse.

The organic failure takes place as well as the total stopping of certain organs. An energy deficit causes a counter balance and goes as far as destroying the bone balance by eliminating the magnetic energy of the human body.

The virus is rich in uranium which with its combination with the sulfur agent becomes infectious to the blood level. The Body energy fails as soon as the toxins roll up carbon, which weakens the activity of the oxygen agent, which leads to an imbalance in the iron rate in the body. The blood feeds from this wall which projects a viscous substance feeding on the alimentary substances of the lymphatic circuit which serves as a stream containing the elements necessary for the organism and the toxins released by the blood.

Gravity G-

Gravity G- is a treatment product. It is capable, up to a certain point of going back to the cause and acting on it. It acts on several levels: it is recommended for its curative power, this product is able to act on the nerve centers to annihilate the perception of the radioactive cells or its translation in terms of intensity. When injected to the body it will eliminate the viral cell, it is designed to eliminate in its extreme intensity, it is the fruit of many years of researches.

As a result of my study COVID-19 is caused by an external environment originating from an Atmospheric Virus, affecting in depth the body energetic metabolism.

Gravity G- is a Remedy that is placed under an injection that reacts on the lymph and spreads to the Gray matter. Its active effect at the level of the organism will not allow any shaking of the defensive cells at the level of the organism and reacts directly on the gray matter and acts on the heart and cell rhythm and goes up to the neurons.

Gravity G- 's components are free from any chemical materials give a tenacity and rebalances the body energies that leaves place for a remarkable body immunity [1-6].

Conclusion

The viral cell intensifies in the absence of the iron agent at the level of the organism therefore deliberates a failure in the gray matter. The authenticity of this formula deteriorates the radioactivity of red blood cells which increases by the chemical reaction of any chem-

ical and atomic agent. The failure at the organic level at the starting point of the MN viral cell is localized at the level of the respiratory organs. The complementary medical treatment to regulate this energy deficiency and to detoxify the body of this cell is to connect to the respiratory metabolism only to oxygenate the body.

MN virus is revealing at the bone level and destroys the resistance of the cells while causing dilation at the level of the atoms forming the bone tissues. The radioactive activity of the virus is very resistant to the cardiac system, although the rhythm seems very little variable, the energy activating the arterial cells is compensated for in the blood and blocked by a failure of the potassium agent which presents itself in the form of energy sparks in the form of a compressing and decompressing body, energy B is the essence of the cardiac mechanism. This failure causes a relaxation of the vital tissues at the level of the blood velocity which becomes greater than the magnetic pressure of the arterial pump of the blood circuit. When the oxygenation of this nerve is blocked, it causes a dysfunction in the blood which causes a failure in the respiratory level.
