Appetite Improvement: Anorexia is generally a cancer problem, but most patients are very difficult to solve the appetite problem. It is the main reason to effectively deprive the body of the nutrients necessary to combat the disease effectively. And it causes extreme weakness (cachexia) of the patient.

GREENSAP improves appetite and makes life survive.

(One of the first effects observed using GREENSAP is a remarkable improvement in appetite that excellently stimulates all other processes, thus achieving health recovery with patient nutritional status and functional ability).

Protective effect of gastric mucosa: There is deterioration of gastritis due to taking many medicines. Furthermore, it progresses to ulcer stomach, and severe stomach cancer, even ordinary meals are impossible.

GREENSAP has evidenced these diseases, illnesses, protective effects on the lining of the stomach (gastric mucosa), mucous membranes.

Improved intestinal transit: Many cancers of colon (colon) have been proven to be associated with poor intestinal transport.

Because of the high content of vegetable fiber GREEN SAP is important, thereby improving the aid of the patient's health condition, regulating the disposal of harmful substances in the rectum.

Liver protection effect: Liver is treated as food and important function as a processing factory (it cannot survive if it does not work normally) and function It is also very important in the detoxification process of the human body.

Patients with other diseases such as cancer or viral infection often suffer from serious liver problems that will endanger the life of the patient.

In GREENSAP's study, in many patients it contains flavonoids and other herbs and has a powerful hepato protective effect.

GREENSAP has a dangerous effect on the formation of hepatocytes and prevents toxins produced by suffering.

The main reason why bile fatty acids interfere with absorption in the intestine has been demonstrated in laboratory trials that blood cholesterol levels were periodically improved with GREENSAP.

Effect of application: In the first week, the appearance of pimples will flourish. The effect is limited due to recurrence

Drink dilution: In the first week, the affected area gradually decreases, but the other areas come out.

Coating and diluent: In the first week, the spread of the affected part is limited, there is no new recurrence of the application part.

Conclusion

The effect of Greensap.

1. Because the appearance of acne and pimples may be due to toxins in the body and too much lipid. Drinking diluent is necessary first.
2. Pimples and pimples need to regulate the internal environment due to internal origin and improvement of the internal environment of the Green Sap is effective.
3. Improvement of the internal environment and application to the affected area are necessary, and although it takes time, it is steadily improving.
